

Sales StockX

Gildardo Gamino Torres

Preparation, Processing, Analysis, Visualization | Excel

Overview

For this data analysis project, I focused on extracting, analyzing, and cleaning sales data from StockX. I created various visualizations, including pivot tables and charts, to examine global sales trends, sales by country, and sales by brand. Additionally, I conducted an analysis of the percentage differential between brands and developed a comparative graph of price over time between Adidas and Nike. Finally, I implemented a dynamic dashboard to allow for personalized variable analysis.

Key Points

- I conducted the extraction, analysis, and cleaning of StockX sales data.
- I created visualizations to examine global sales trends, sales by country, and sales by brand.
- I analyzed the percentage differential between brands.
- I developed a comparative graph of price between Adidas and Nike
- I implemented a dynamic dashboard for personalized analysis.
